Professional Summary

Data & Reporting Analyst with experience across the end-to-end analytics lifecycle: gathering requirements, shaping business questions, transforming data, and delivering decision-ready insights. Comfortable working as a **data analyst**, **business analyst**, **reporting analyst**, or **analytics engineer**, with a strong focus on **SQL**, **Power BI**, and **Python**. Skilled at designing **data models**, defining **KPIs**, and building **dashboards** and **datasets** that help product, finance, and operations teams make confident decisions.

Skills

- **Data & BI Stack:** SQL (joins, window functions, performance-aware querying), advanced Excel, **Power BI** (data modeling, DAX), R, Tableau, and Python (Pandas and Pyspark)
- **Data Modeling & Pipelines:** Relational, snowflake and star schema design, building ETL/ELT workflows, managing layered datasets, automation with Power Automate and **Microsoft Fabric**, data wrangling.
- **Analytics & Business Problem-Solving:** Requirements gathering, KPI and metric design, descriptive statistics and trend analysis, root-cause investigation, turning business questions
- **Communication & Stakeholder Skills:** Data storytelling, building clear dashboards and reporting packs, documenting KPI definitions and data lineage, and explaining complex variances and insights to non-technical stakeholders.

Work Experience

Data and Reporting Analyst *May 2025 – Dec 2025*
Alberta Innovates *Edmonton, AB*

- Engineered automated **Power BI** solutions and **ETL pipelines** within **Microsoft Fabric** that ensured 100% data reliability for 20+ executive stakeholders, bridging the gap between raw operational data and strategic decision-making.
- Compiled, maintained, and validated **8+ years of multi-source datasets**, performing structured **audits, variance analysis, and reconciliation checks** to improve reporting accuracy and audit readiness by 25%.
- Acted as a technical **lead** to automate **recurring workflows** using Python, transforming **complex operational variances** into **actionable insights** and reducing the turnaround time for **ad-hoc** analytical requests..

Data Analyst Intern *May 2023 – Aug 2023*
Whistling Solutions *Edmonton, AB*

- Automated reporting workflows using **Power Automate** and scheduled data refreshes, replacing manual spreadsheet updates and freeing up time for analysis and decision-making.
- Cleaned and reconciled **50K+** operational records using **SQL** and **Python** to create analysis-ready tables for leadership dashboards and ad hoc requests.
- Documented **10+ KPI definitions** and **procedural guidelines** to improve dashboard usability and ensure consistency across reporting teams.

Projects

Production-Grade ETL Pipeline (REST API to SQL Analytics)

- Built a REST API ingestion pipeline into a relational SQL database with **immutable raw ingestion**, enabling safe re-runs and full traceability of changes across pipeline runs.
- Implemented **data quality checks** including null validation, deduplication, and hash-based change detection so that only valid and changed records flowed into analytics tables.
- Structured data into **layered SQL marts** (raw, cleaned, analytics) to reduce query complexity and make it easier to plug the data into dashboards and reporting tools.

Global Retail Operations Intelligence Hub (Power BI)

- Modeled and integrated multiple retail datasets (orders, returns, products, regions) into a unified **star schema**, focusing on clean relationships and reusable dimensions.
- Engineered a **DAX** metrics layer to track return rates, inventory turnover, margin trends, and YTD performance, supporting both day-to-day operations and management reviews.
- Designed an **executive-friendly Power BI dashboard** that highlighted regional performance, seasonal patterns, and bottlenecks, giving a clear view of where to act.

Education

BSc in Computer Science with a Business Minor *Sept 2021 – Dec 2024*
University of Alberta *Edmonton, AB*

- Relevant coursework: Database Management, Machine Learning, Business Analytics, Statistics, Operations Management.

Professional Certificate in Data Analytics
